Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the prior art fails to disclose the particular catheter having a reduced diameter intermediate section and including resilient component and actuator to impart a curvature to a deflectable segment of the catheter as set forth in the instant application claims. Avitall (5,242,441) discloses a reduced diameter flexible section (14), but does not include, among other things, a distal segment with a larger diameter portion or the particular cryogenic expansion means as set forth in the claims. Beals (6,524,296) discloses a catheter which does include a reduced diameter intermediate section (26). However, the Beals reduced diameter section is a rigid section of the catheter, hence there is no motivation to provide a distal steering means to impart curvature to this segment. MacFarlane (5,246,430) discloses a catheter substantially like Beals which includes a reduced diameter portion of a catheter, the reduced diameter portion being made of a more rigid material to prevent flexing or curving of this section. Milder et al (5,281,213) and Lafontaine (5,868,735) disclose steerable cryosurgical catheters, but fail to disclose the particular reduced diameter section as set forth in the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
